PROFESSIONAL SUMMARY

DevOps Engineer and Site Reliability Engineer (SRE) with 3.10+ years of experience building and operating secure, scalable cloud-native platforms on AWS and Kubernetes (EKS and AKS). Skilled in CI/CD automation, Infrastructure as Code (IaC), and container security scanning, with a track record of reducing deployment time by 30%, cutting manual release effort by 90%, and remediating 1,000+ container vulnerabilities to reduce security risk by 70%. Hands-on experience with High Availability (HA), Disaster Recovery (DR), on-premises GPU-based LLM inference workloads, and AWS Marketplace AMI delivery. Proficient in Prometheus, Grafana, Terraform, GitHub Actions, Azure DevOps, Anchore, Grype, and Helm.

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (AWS) — EC2, EKS, S3, IAM, Secrets Manager, CloudFormation, AWS Marketplace, VPC, Security Groups & Azure Cloud

Containers and Orchestration: Docker, Kubernetes, Helm, Amazon EKS, Azure AKS (Azure Kubernetes Service), Istio service mesh, Docker-in-Docker (DinD)

Infrastructure as Code (IaC): Terraform, AWS CloudFormation, cloud-init

CI/CD Pipelines: GitHub Actions, Azure DevOps Pipelines, Jenkins

Monitoring and Observability: Prometheus, Grafana, alerting, metrics, performance tuning, incident response

Security: Anchore, Grype, CVE remediation, IAM least-privilege, RBAC, AWS Secrets Manager, secret rotation, network security scanning, container vulnerability scanning

AI and LLM Infrastructure: On-premises GPU machine setup, open-source LLM hosting

Programming and Scripting: Python, Bash scripting

Version Control: Git

Operating Systems: Linux (Ubuntu, RHEL), Windows, VMware

WORK EXPERIENCE

DevOps Engineer / SRE Engineer | Modak Analytics Hyderabad, India | Aug 2022 – Present

Kubernetes and Cloud Infrastructure

- Deployed and managed production workloads on Amazon EKS and Azure AKS across 3+ environments, ensuring high availability and scalability for applications serving multiple enterprise clients.
- Built and maintained a library of 10+ reusable Helm charts to standardize Kubernetes application deployments across 5+ product teams, reducing per-team setup time by approximately 60% and eliminating configuration drift.
- Provisioned AWS infrastructure including EC2, VPC, subnets, IAM roles, and security groups using Terraform and CloudFormation with cloud-init for automated instance bootstrap configuration.
- Implemented Docker-in-Docker (DinD) workflows to enable isolated execution of Google Cloud (gcloud) jobs within containerized CI/CD environments, eliminating cross-job dependency conflicts.
- Conducted load testing and stress testing across 21+ services to identify performance bottlenecks and optimize scalability before production releases.

CI/CD and Automation

- Designed and implemented CI/CD pipelines using GitHub Actions and Azure DevOps Pipelines, reducing deployment time by 30% and cutting release failures by standardizing build and test gates.
- Developed a Python-based deployment automation framework supporting 10+ client environments, reducing manual deployment effort by 90% per release cycle.
- Automated cloud and on-premises deployments using Bash scripting across 3 environment tiers (development, staging, production), enabling repeatable and consistent releases.
- Implemented deployment resume and failure-recovery mechanisms, cutting mean time to recovery (MTTR) by approximately 40% and minimizing rollback scenarios.

Security and Site Reliability Engineering (SRE)

- Integrated Anchore and Grype container image scanning into CI/CD pipelines, remediating 1,000+ vulnerabilities and reducing overall container security risk by 70%.

- Designed and implemented custom network security scanning covering 500+ IP ranges across AWS, Azure, and on-premises environments, surfacing and remediating exposed attack vectors before production deployment.
- Implemented monitoring and alerting using Prometheus and Grafana, cutting mean incident detection time by 35% and improving system observability across production workloads.
- Supported High Availability (HA) and Disaster Recovery (DR) strategies and participated in on-call incident response, achieving 99.9% uptime SLA across critical production services.

AWS Marketplace and LLM Infrastructure

- Enabled customer deployments via AWS Marketplace using custom Amazon Machine Images (AMIs) for 3+ product releases; led testing, security validation, and release readiness reviews prior to each launch.
- Set up and maintained 4+ on-premises GPU machines for hosting open-source Large Language Models (LLMs), supporting inference workloads for 3+ models used by internal teams and clients.

PROJECTS

Python Deployment Automation Framework | Modak Analytics (Internal)

- Built a Python framework to orchestrate multi-client deployments across on-premises and cloud environments, supporting 10+ client configurations with resume-on-failure and rollback capabilities; eliminated approximately 8 hours of manual release work per deployment cycle.

Container Security Scanning Pipeline | GitHub Actions / Anchore / Grype

- Integrated automated CVE scanning into CI/CD pipelines for all containerized workloads; remediated 1,000+ vulnerabilities and enforced a gate blocking high-severity images from reaching production environments.

On-Premises LLM Inference Platform | GPU Servers / Kubernetes / Helm

- Set up and maintained on-premises GPU infrastructure for hosting open-source LLMs, including Kubernetes-based deployment, Helm chart configuration, and a Prometheus and Grafana observability stack serving 3+ active models.

EDUCATION

Bachelor of Technology (B.Tech), Information Technology

Sreenidhi Institute of Science and Technology, Hyderabad, India | 2018 – 2022 | CGPA: 8.38 / 10

AWARDS AND RECOGNITION

Emerging Leader Award — Modak Analytics | December 2024

KEY ACHIEVEMENTS

- Reduced deployment time by 30% through CI/CD pipeline automation using GitHub Actions and Azure DevOps Pipelines.
- Eliminated 90% of manual deployment effort per release cycle by building a Python-based multi-client deployment automation framework supporting 10+ client environments.
- Remediated 1,000+ container vulnerabilities, reducing container security risk by 70% through Anchore and Grype integration in CI/CD pipelines.
- Cut mean incident detection time by 35% and maintained 99.9% production uptime through Prometheus and Grafana monitoring and on-call SRE participation.
- Delivered 3+ AWS Marketplace AMI releases with full security validation, and operated 4+ on-premises GPU machines supporting LLM inference for internal and client workloads.
