PROFESSIONAL SUMMARY

DevOps Engineer at DP World with 4+ years of experience building secure, automated delivery pipelines and operating cloud-native platforms on Azure, AWS, and Kubernetes (AKS and EKS). Currently improving the organization-wide CI/CD process in Azure DevOps with reusable pipeline templates and built-in security gates (Veracode, Gitleaks, SonarQube). Previously reduced deployment time by 30%, cut manual release effort by 90%, and remediated 1,000+ container vulnerabilities to lower security risk by 70%. Hands-on with Terraform, Helm, GitHub Actions, Prometheus, Grafana, High Availability and Disaster Recovery, AWS Marketplace AMI delivery, and on-premises GPU-based LLM inference.

TECHNICAL SKILLS

Cloud Platforms	Microsoft Azure (AKS), Amazon Web Services (EC2, EKS, S3, IAM, VPC, Security Groups, Secrets Manager, CloudFormation, AWS Marketplace)
CI/CD	Azure DevOps Pipelines (YAML templates), GitHub Actions, Jenkins, ArgoCD, Git, branching strategy, semantic versioning
DevSecOps	Veracode (SAST), Gitleaks (secret scanning), SonarQube, Anchore, Grype, CVE remediation, IAM least privilege, RBAC, secret rotation
Containers	Docker, Kubernetes, Helm, Istio, Karpenter, HPA/VPA, Docker-in-Docker (DinD)
Infrastructure as Code	Terraform, AWS CloudFormation, cloud-init
Observability	Prometheus, Grafana, New Relic, alerting, incident response, root cause analysis (RCA)
Scripting	Python, Bash
AI Infrastructure	On-premises GPU servers, open-source LLM hosting on Kubernetes
Operating Systems	Linux (Ubuntu, RHEL), Windows, VMware

WORK EXPERIENCE

DevOps Engineer | DP World

Hyderabad, India | Jul 2026 – Present

- Improving the organization-wide CI/CD process in Azure DevOps with standardized, reusable YAML pipeline templates, a central branching model, and semantic versioning across many microservices.
- Integrating security gates into pipelines: Veracode static analysis, Gitleaks secret scanning with custom detection rules, and SonarQube code quality checks.
- Contributing to a shared Python deployment library used by every Kubernetes service, including moving ConfigMap deployment to server-side apply to resolve a platform-wide size-limit failure.
- Supporting AKS deployments and production releases, and writing root cause analyses (RCAs) for pipeline incidents.
- Running knowledge-transfer sessions for new engineers on Kubernetes storage, scaling, and scheduling, and on Azure DevOps.

Tech: Azure DevOps, Veracode, Gitleaks, SonarQube, AKS, Helm, Python

DevOps Engineer | Modak Analytics

Hyderabad, India | Aug 2022 – Jun 2026

Kubernetes and Cloud Infrastructure

- Deployed and managed production workloads on Amazon EKS and Azure AKS across 3+ environments, ensuring high availability and scalability for applications serving multiple enterprise clients.
- Built and maintained 10+ reusable Helm charts to standardize Kubernetes deployments across 5+ product teams, reducing per-team setup time by approximately 60% and eliminating configuration drift.
- Provisioned AWS infrastructure (EC2, VPC, subnets, IAM roles, security groups) with Terraform and CloudFormation, using cloud-init for automated instance bootstrap.
- Implemented Docker-in-Docker (DinD) workflows to run Google Cloud (gcloud) jobs in isolated CI/CD containers, eliminating cross-job dependency conflicts.
- Conducted load and stress testing across 21+ services to find performance bottlenecks before production releases.

CI/CD and Automation

- Designed and implemented CI/CD pipelines with GitHub Actions and Azure DevOps, reducing deployment time by 30% and cutting release failures through standardized build and test gates.

- Developed a Python-based deployment automation framework supporting 10+ client environments, reducing manual deployment effort by 90% per release cycle.
- Automated cloud and on-premises deployments with Bash across development, staging, and production tiers for repeatable, consistent releases.
- Implemented deployment resume and failure-recovery mechanisms, cutting mean time to recovery (MTTR) by approximately 40%.

Security, Monitoring, and Reliability

- Integrated Anchore and Grype container image scanning into CI/CD pipelines, remediating 1,000+ vulnerabilities and reducing container security risk by 70%.
- Designed custom network security scanning covering 500+ IP ranges across AWS, Azure, and on-premises environments, remediating exposed attack vectors before production.
- Implemented monitoring and alerting with Prometheus and Grafana, cutting mean incident detection time by 35%.
- Supported High Availability (HA) and Disaster Recovery (DR) strategies and on-call incident response, maintaining a 99.9% uptime SLA for critical production services.

AWS Marketplace and LLM Infrastructure

- Enabled customer deployments through AWS Marketplace with custom Amazon Machine Images (AMIs) for 3+ product releases, leading testing, security validation, and release readiness reviews.
- Set up and maintained 4+ on-premises GPU machines hosting open-source Large Language Models (LLMs), supporting inference for 3+ models used by internal teams and clients.

Tech: AWS, EKS, AKS, Terraform, CloudFormation, GitHub Actions, Azure DevOps, Helm, Anchore, Grype, Prometheus, Grafana, Python, Bash

PROJECTS

Secure CI/CD Pipeline Templates DP World | Azure DevOps, Veracode, Gitleaks, SonarQube
Reusable Azure DevOps YAML templates that give every service the same build, versioning, and release flow, with Veracode, Gitleaks, and SonarQube checks built in for secure-by-default delivery.

Python Deployment Automation Framework Modak Analytics | Python, Kubernetes, CI/CD
Orchestrated multi-client deployments across on-premises and cloud environments for 10+ client configurations, with resume-on-failure and rollback; saved approximately 8 hours of manual work per release.

Container Security Scanning Pipeline Modak Analytics | GitHub Actions, Anchore, Grype
Automated CVE scanning for all containerized workloads; remediated 1,000+ vulnerabilities and enforced a gate that blocks high-severity images from reaching production.

On-Premises LLM Inference Platform Modak Analytics | GPU, Kubernetes, Helm
Kubernetes-based LLM hosting on on-premises GPU servers with Helm deployments and a Prometheus and Grafana observability stack serving 3+ active models.

EDUCATION

B.Tech, Information Technology | Sreenidhi Institute of Science and Technology, Hyderabad 2018 – 2022 | CGPA 8.38 / 10

AWARDS AND RECOGNITION

Emerging Leader Award | Modak Analytics Dec 2024

KEY ACHIEVEMENTS

- Reduced deployment time by 30% through CI/CD automation with GitHub Actions and Azure DevOps.
- Eliminated 90% of manual deployment effort per release with a Python multi-client deployment framework.
- Remediated 1,000+ container vulnerabilities, reducing container security risk by 70%.
- Cut incident detection time by 35% and maintained 99.9% production uptime with Prometheus and Grafana monitoring.
- Delivered 3+ AWS Marketplace AMI releases and operated 4+ on-premises GPU machines for LLM inference.
